# What is Web AppBuilder?

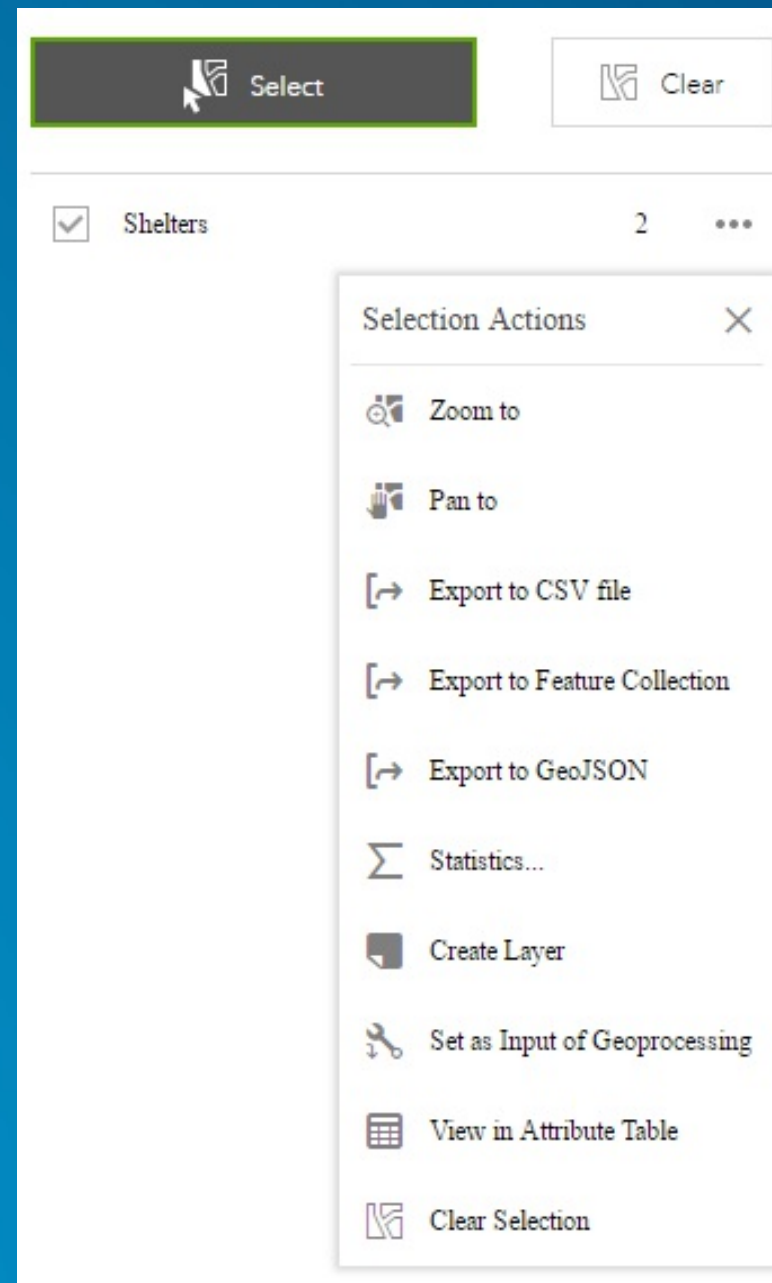

Your browser does not support the video tag.

# When to use Web AppBuilder

- Good for:
  - Multi-purpose apps that need to run on multiple devices
  - Creating a suite of custom apps with consistent style/behavior
  - Empowering non-developers to create apps
- Other frameworks/templates might be better for:
  - Specific, custom web apps, with specialized workflows
  - When there is a template that does almost all of app functionality

# What's new in Web AppBuilder

Your browser does not support the video tag.

# Development Patterns and Tools

Patterns are the same ...  
Tools have improved

# Patterns

1. Keep your source code outside of the WAB folders
2. Don't write WAB widgets from scratch
3. WAB widgets wrap your own widgets
4. Test your code outside the WAB
5. Build your applications for production

## Tools: Yeoman - Grunt - Babel

*BABEL*

# Do I Really Need These Tools?

Builder experience is powerful

# WSIWG builder adds complexity

Easy for configurators = harder for developers

Generators automate this extra work for us

# Scaffold out boilerplate code

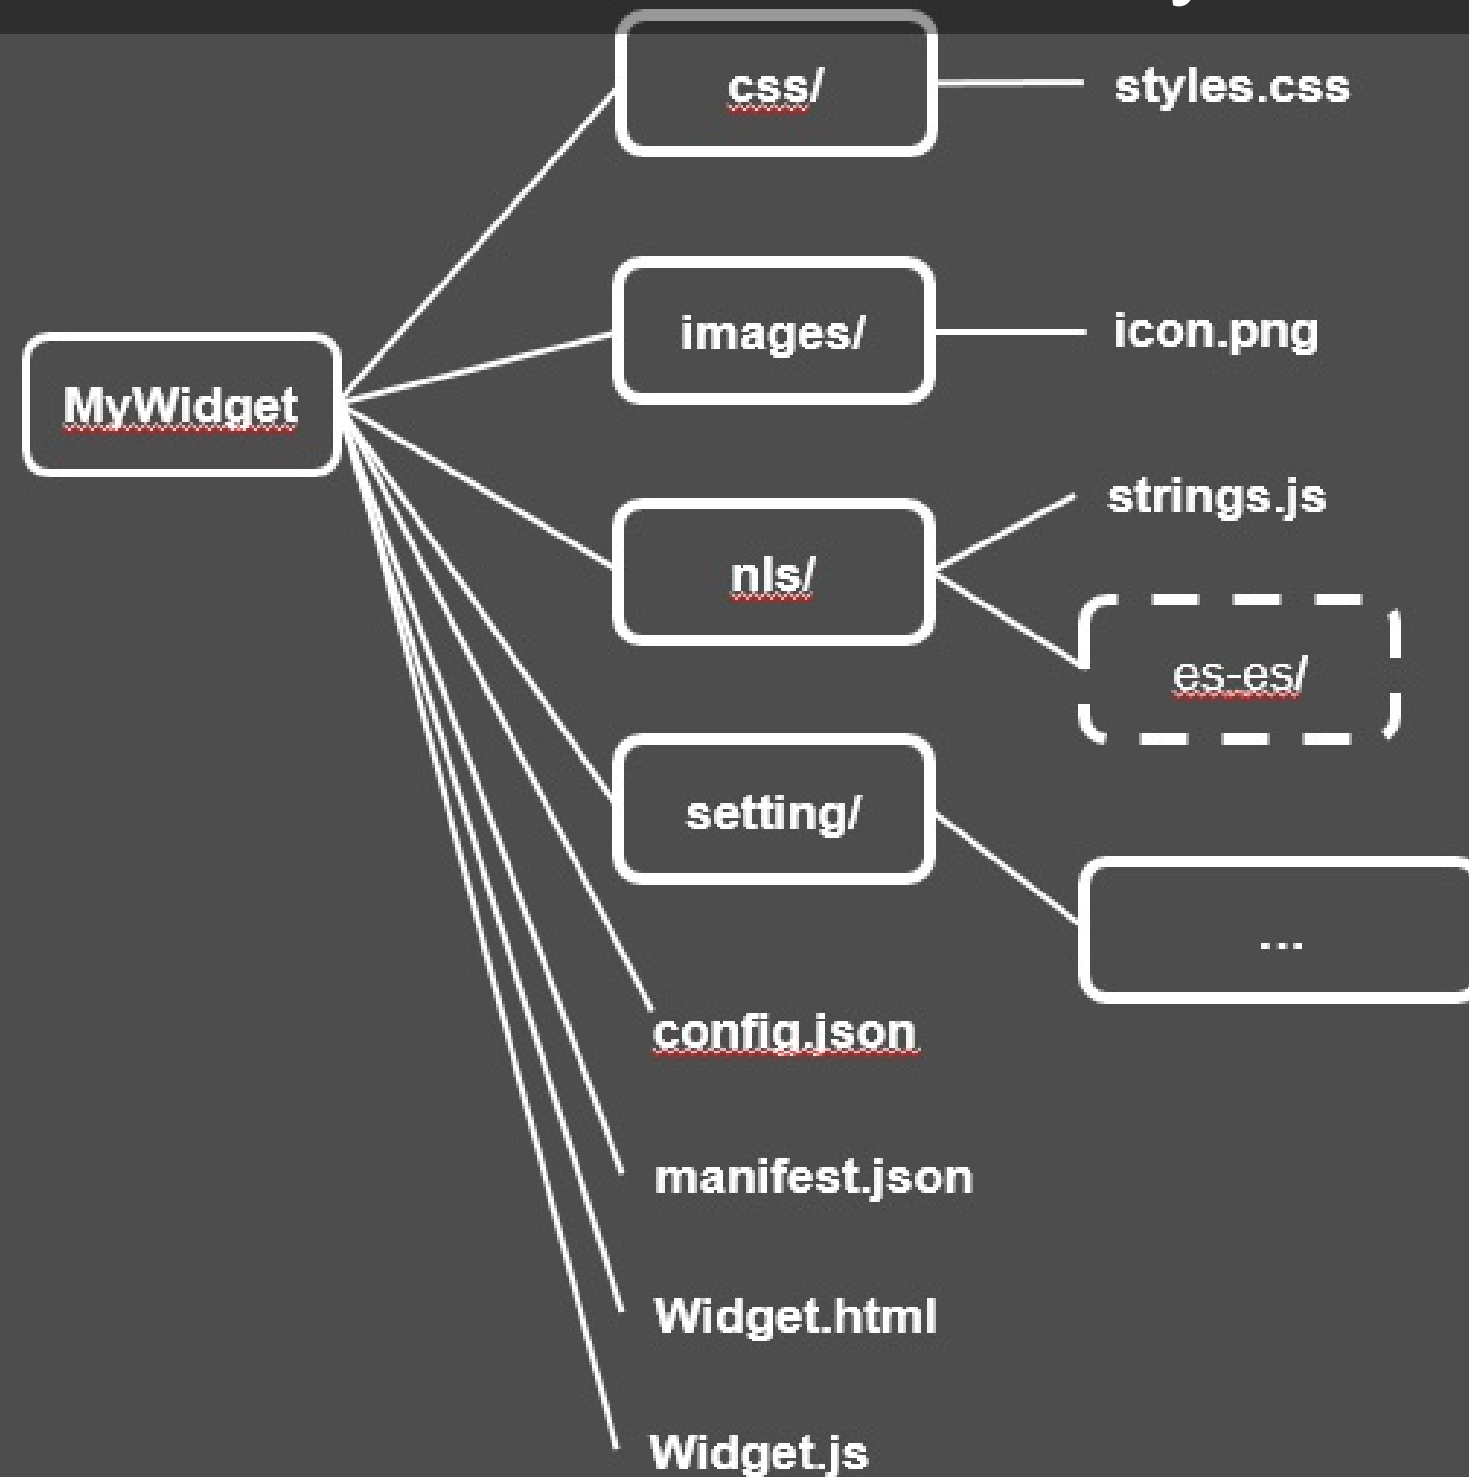

Install / configure tools to automate tasks

# WAB is an opinionated framework on top of JSAPI

# Heavy use of convention - influenced by Rails

# Ideal for a generator: yo esri-appbuilder-js

```
λ yo esri-appbuilder-js
```

Welcome to the ArcGIS  
Web AppBuilder  
generator!

```
These generators should be run in the root folder of your project.  
? Type of widget(s) to be generated: 2D  
? Web AppBuilder install root: C:\Users\gavi6895\Documents\Projects\  
? Web AppBuilder application: 6  
? Would you like to use SASS for CSS preprocessing? Yes  
  create .editorconfig  
  create .babelrc
```

# Installs tools to transpile and copy to WAB folder

```
λ yo esri-appbuilder-js
```

Welcome to the ArcGIS  
Web AppBuilder  
generator!

```
These generators should be run in the root folder of your project.  
? Type of widget(s) to be generated: 2D  
? Web AppBuilder install root: C:\Users\gavi6895\Documents\Projects\  
? Web AppBuilder application: 6  
? Would you like to use SASS for CSS preprocessing? Yes  
  create .editorconfig  
  create .babelrc
```

# Subgenerator to scaffold out widget files

```
λ yo esri-appbuilder-js
```

Welcome to the ArcGIS  
Web AppBuilder  
generator!

```
These generators should be run in the root folder of your project.  
? Type of widget(s) to be generated: 2D  
? Web AppBuilder install root: C:\Users\gavi6895\Documents\Projects\  
? Web AppBuilder application: 6  
? Would you like to use SASS for CSS preprocessing? Yes  
  create .editorconfig  
  create .babelrc
```

# New Features: SASS styling, custom themes

```
λ yo esri-appbuilder-js
```

Welcome to the ArcGIS  
Web AppBuilder  
generator!

```
These generators should be run in the root folder of your project.  
? Type of widget(s) to be generated: 2D  
? Web AppBuilder install root: C:\Users\gavi6895\Documents\Projects\  
? Web AppBuilder application: 6  
? Would you like to use SASS for CSS preprocessing? Yes  
  create .editorconfig  
  create .babelrc
```

# Patterns Review

1. Keep your source code outside of the WAB folders
2. Don't write WAB widgets from scratch
3. WAB widgets wrap your own widgets
4. Test your code outside the WAB
5. Build your applications for production

# Pattern: Source Code

# Web AppBuilder Folder Structure

# Only Keep YOUR Code in Source Control

# Demo: App Generator

Pattern:

Do Not Write Widgets from Scratch

# Demo: Widget Sub Generator

Pattern:  
Wrap Your Widgets  
....maybe

How do I test all this Web App Builder code?

# Pattern: Build for Production

The background is a dark, abstract composition featuring several thick, wavy red lines that sweep across the frame. Overlaid on these are numerous thin, white, translucent lines that form a complex, web-like pattern. Scattered throughout this pattern are various numbers in a white, sans-serif font, including 80, 100, 120, 140, 160, and 180. The overall effect is one of dynamic movement and layered information.

Demo: Build it!
